

# Plugin Module

Use this [wiki plugin](#) to display [Modules](#) in a page, column or other module zone.

## Parameters

Display a module

Introduced in Tiki 1. Required parameters are in **bold**.

[Go to the source code](#)

Preferences required: `wikiplugin_module`

| Parameters         | Accepted Values                   | Description  | Default | Since |
|--------------------|-----------------------------------|--|---------|-------|
| <b>module</b>      | . (cont.)<br>(cont'd)<br>(cont'd) | Module name as known in Tiki   |         | 1     |
| <b>title</b>       | text                              | Title to display at the top of the box, assuming No Title is not set to Yes (y).   |         | 1     |
| <b>contributor</b> | alpha                             | Module only available based on the relationship of the user with the wiki page. Either only contributors (%0y%1) or only non-contributors (%0n%1) will see the module.                             |         | 9.0   |
| <b>creator</b>     | alpha                             | Module only available based on the relationship of the user with the wiki page. Either only creators (y) or only non-creators (n) will see the module.   |         | 9.0   |
| <b>device</b>      | <i>separator: ;</i>               | On which device the module must be displayed, by default it is displayed on all devices.   |         | 24    |
| <b>max</b>         | digits                            | Number of rows (default: 10)   | 10      | 1     |
| <b>notitle</b>     | (blank)<br>y<br>n                 | Select Yes (y) to hide the title (default is to show the title)  |         | 3.0   |
| <b>bgcolor</b>     | text                              | Override the background color for the title (if the title is shown). The value can be a color name (ex: <code>bgcolor="blue"</code> ) or a hexadecimal value (ex: <code>bgcolor="#FFEBCD"</code> ) |         | 9.0   |
| <b>decoration</b>  | (blank)<br>1<br>0                 | Show module title (heading) background, etc. (default is to show them)   |         | 1     |
| <b>category</b>    | alnum<br><i>separator: ;</i>      | Module displayed depending on category. Multiple category ids or names can be separated by semi-colons.  |         | 9.0   |
| <b>class</b>       |                                   | Custom CSS class.  |         | 9.0   |
| <b>topclass</b>    |                                   | Custom CSS class of div around the module.   |         | 9.0   |

|              |                                     |   |   |     |
|--------------|-------------------------------------|---|---|-----|
| flip         | (blank)<br>1<br>0                   | Add ability to show/hide the content of the module (default is the site admin setting for modules)  |   | 1   |
| float        | (blank)<br>nofloat<br>left<br>right | Align the module to the left or right on the page allowing other elements to align against it   |   | 1   |
| lang         | lang<br><i>separator: ;</i>         | Module only applicable for the specified languages. Languages are defined as two character language codes. Multiple values can be separated by semi-colons.   |   | 9.0 |
| module_style |                                     | Inline CSS for the containing div element, for example, <code>max-width:80%</code>  |   | 9.0 |
| nobox        | (blank)<br>y<br>n                   | y n Show only the content with no title or borders, etc. around the content.  |   | 9.0 |
| nocategory   | alnum<br><i>separator: ;</i>        | Module hidden depending on category. Multiple category ids or names can be separated by semi-colons. This takes precedence over the category parameter above.   |   | 9.0 |
| nopage       | pagename<br><i>separator: ;</i>     | Module not applicable on the specified page names. Multiple values can be separated by semi-colons.   |   | 9.0 |
| page         | pagename<br><i>separator: ;</i>     | Module only applicable on the specified page names. Multiple values can be separated by semi-colons.  |   | 9.0 |
| np           | (blank)<br>0<br>1                   | Parse wiki syntax. Default: No  | 1 | 1   |
| perspective  | digits<br><i>separator: ;</i>       | Only display the module if in one of the listed perspective IDs. Semi-colon separated.  |   | 9.0 |
| section      | text<br><i>separator: ;</i>         | Module only applicable for the specified sections. Multiple values can be separated by semi-colons.   |   | 9.0 |
| style        |                                     | CSS styling for the module data itself.   |   | 9.0 |
| theme        | themename<br><i>separator: ;</i>    | Module enabled or disabled depending on the theme file name (e.g. <code>thenews.css</code> ). Specified themes can be either included or excluded. Theme names prefixed by <code>!</code> are in the exclusion list. Multiple values can be separated by semi-colons. |   | 9.0 |

## Examples

### Basic syntax

*This code:*

```
{module module="wiki_last_comments"}
```

Would produce on this site:

## Last wiki comments

1. **Sublist:** Specify multiple (from Kroky on the matrix room)
2. **Sublist:** Specify multiple (from Kroky on the matrix room)
3. **Sublist:** Specify multiple (from Kroky on the matrix room)
4. **Sublist:** Specify multiple (from Kroky on the matrix room)
5. **Inline comments:** Here is a comment about targeted comments
6. **User Preferences:** feature\_userPreferences must be enabled
7. **Mail notifications:** Setting' → Mail Notifications?
8. **Move Tiki to a new server:** Slightly different
9. **Roles:** How to activate Roles?
10. **Pretty Tracker:** This is exactly what I needed

## Displaying a module in a Template (.tpl)

You can place a module anywhere (header, footer) using the following syntax in a .tpl file:

```
{module module="wiki_last_comments"}
```

Older version of Tiki can revert to embedding wiki syntax:

```
{wiki}{literal}{module module="wiki_last_comments"}{/literal}{/wiki}
```
