

PluginPreview

A [Wiki Plugin](#) added to [Tiki18](#)

A Wiki Plugin to preview files from the file gallery. Allows the user to generate animated gifs from videos, and scaled previews for images and videos.

Starting in [Tiki20](#), can preview more file types via [unoconv](#). It requires appropriate tools on the server to convert file to HTML. See requirements at <https://packagist.org/packages/media-alchemyst/media-alchemyst> , and these have been added to Tiki [Check](#).

Parameters

Enabled to generate preview of images or video files

Introduced in Tiki 18. Required parameters are in **bold**.

[Go to the source code](#)

Preferences required: wikiplugin_preview

Parameters	Accepted Values	Description	Default	Since
fileId	int	Id of the file in the file gallery		18.0
range		Page range preview in the format -. Example for the preview page from 2 to 4: "2-4"		21.0
animation	int	Output should be a static image (0) or an animation (1)		18.0
download	int	Show download link to the original file		19.0
height	int	Height of the result in pixels		18.0
width	int	Width of the result in pixels		18.0

Preview PDF and other documents

The preview pdf and other document formats, media-alchemyst package is required.

Also ensure that the system is configured to avoid Document to Image conversion issues. [Media-Alchemyst - Document to Image issues](#)
