

# Plugin Redirect

Introduced in [Tiki3](#)

Use this [wiki plugin](#) to semi-permanently redirect any existing wiki page to any other specified wiki page or URL. If it's for wiki pages, a better alternative is the [Page Alias](#)

## Parameters

Redirect to another page.

Introduced in [Tiki 3](#).

[Go to the source code](#)

Preferences required: `wikiplugin_redirect`

Parameters	Accepted Values	Description	Default	Since
<code>autologin_remotetiki</code>	<code>url</code>	Base URL where remote Tiki is located, to auto login to prior to redirection to page there, e.g. <a href="https://othertiki.com">https://othertiki.com</a> .		
<code>url</code>	<code>url</code>	Complete URL, internal or external.		3.0
<code>page</code>	<code>pagename</code>	Wiki page name to redirect to.		3.0
<code>perspective</code>	<code>int</code>	The ID of a perspective to switch to (requires <code>feature_perspective</code> ).		7.1

Note:

- It does not check permissions of the destination page, so users may need to login after redirect.
- It can redirect to a wiki page or to any URL, which is why there is [Plugin security](#)
- There is no warning about "you will be redirected in 5 seconds message" or similar; it's instant!
- There is a check to stop possible loops
- URL redirects can be both: absolute starting with protocol like `http://` or relative to the Tiki root

## How to edit the redirect page?

Q:How do you go back to original page for editing...

A: Use `/tiki-editpage.php?page=TheTargetPageWithTheRedirectPlugin`

You can also go to the page history to view source, compare or unroll changes made that include the REDIRECT code. Use `/tiki-pagehistory.php?page=TheTargetPageWithTheRedirectPlugin`

## Examples

The redirect plugin usage is:

```
{redirect page="pagename"}
```

or for URLs (`tiki-something.php...` or `http://...`)

```
{redirect url="url"}
```

or for perspectives:

```
{redirect perspective="Id"}
```
