Plugin Redirect

Introduced in Tiki3

Use this wiki plugin to semi-permanently redirect any existing wiki page to any other specified wiki page or URL. If it's for wiki pages, a better alternative is the Page Alias.

Parameters

Introduced in Tiki 3.
Preferences required: wikipugin_redirect

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Accepted Values</th>
<th>Description</th>
<th>Default</th>
<th>Since</th>
</tr>
</thead>
<tbody>
<tr>
<td>autologin_remotetiki</td>
<td>url</td>
<td>Base URL where remote Tiki is located, to auto login to prior to redirection to page there, e.g. <a href="https://othertiki.com">https://othertiki.com</a>.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>url</td>
<td>url</td>
<td>Complete URL, internal or external.</td>
<td>3.0</td>
<td></td>
</tr>
<tr>
<td>page</td>
<td>pagename</td>
<td>Wiki page name to redirect to.</td>
<td>3.0</td>
<td></td>
</tr>
<tr>
<td>perspective</td>
<td>int</td>
<td>The ID of a perspective to switch to (requires feature_perspective).</td>
<td>7.1</td>
<td></td>
</tr>
</tbody>
</table>

Note:

- It does not check permissions of the destination page, so users may need to login after redirect.
- It can redirect to a wiki page or to any URL, which is why there is Plugin security.
- There is no warning about "you will be redirected in 5 seconds message" or similar; it's instant!
- There is a check to stop possible loops
- URL redirects can be both: absolute starting with protocol like http:// or relative to the Tiki root

How to edit the redirect page?

Q: How do you go back to original page for editing...
A: Use /tiki-editpage.php?page=TheTargetPageWithTheRedirectPlugin

You can also go to the page history to view source, compare or unroll changes made that include the REDIRECT code. Use /tiki-pagehistory.php?page=TheTargetPageWithTheRedirectPlugin

Examples

The redirect plugin usage is:

```
{redirect page="pagename"}
```

or for URLs (tiki-something.php... or http://...)

```
{redirect url="url"}
```
or for perspectives:

```{redirect perspective="Id"}
```
