Plugin Regex

Use this wiki plugin to use a "regular expression" style search expression from another wiki page to search for and replace text in the body of the plugin (between the \texttt{REGEX} tags).

Parameters

\textit{Introduced in Tiki 1. Required parameters are in \textbf{bold}.}

\textbf{Go to the source code}

\textit{Preferences required: wikiplugin_regex}

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Accepted Values</th>
<th>Description</th>
<th>Default</th>
<th>Since</th>
</tr>
</thead>
<tbody>
<tr>
<td>(body of plugin)</td>
<td>Each line of content is evaluated separately</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>\texttt{pageName}</td>
<td>Name of page containing search and replace expressions separated by two colons. Example of syntax on that page: \texttt{/search pattern/::replacement text}</td>
<td></td>
<td></td>
<td>1</td>
</tr>
</tbody>
</table>

To use this plugin:

1. Place the search pattern (enclosed with forward slashes) and replacement text on a separate wiki page, separated by two colons (\texttt{::}). For example:
   \texttt{/search pattern/::replacement text}
2. Then enter that page name as the \texttt{pageName} parameter value of the plugin.
3. The text in the body of the plugin (between the \texttt{REGEX} tags) will be searched and each match of the search pattern will be replaced by the replacement text.

This plugin mimics the \texttt{preg_replace} PHP function. For advanced search patterns, see \url{http://www.php.net/manual/en/reference.pcre.pattern.syntax.php} in the online PHP manual or simply search the internet for "regular expression syntax".

Example

\textit{This code:}

\begin{verbatim}
{REGEX(pageName="PluginRegex Example")}I had a horrible day.{REGEX}
\end{verbatim}

\textit{Plus this syntax on a separate wiki page called PluginRegex Example:}

\texttt{/horrible/::wonderful}

\textit{Would produce:}
I had a wonderful day.
