Plugin Smarty

*Introduced in Tiki5*

Use this wiki plugin to insert a Smarty function in a page. Smarty is the template engine used in Tiki.

**Parameters**

*Introduced in Tiki 5. Required parameters are in bold.*

Preferences required: wikipluginSmarty

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Accepted Values</th>
<th>Description</th>
<th>Default</th>
<th>Since</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>word</td>
<td>The name of the Smarty function that the plugin will activate. Available functions can be found at <a href="lib/smarty_tiki/function.(name).php">lib/smarty_tiki/function.(name).php</a> and <a href="vendor_bundled/vendor/smarty/smarty/libs/plugins/function.(name).php">vendor_bundled/vendor/smarty/smarty/libs/plugins/function.(name).php</a></td>
<td>7.0</td>
<td></td>
</tr>
</tbody>
</table>

In addition, the smarty function parameters that are required or allowed should or may be set. The functions available can be found as separate files on the server for each function (name) as follows:

- [lib/smarty_tiki/function.(name).php](lib/smarty_tiki/function.(name).php)
- [vendor/smarty/libs/plugins/function.(name).php](vendor/smarty/libs/plugins/function.(name).php)

**Examples**

**Function to add a button**

*This code:*

```öff
{smarty name="button" href="Search" _text="Search"}
```

*Would produce:*

Search

**Variables**

Smarty variables can be displayed by using the [eval](#) Smarty function. The available Smarty variables for a page can be viewed by Admins by clicking the "Smarty debug window" option in the Quick Administration menu. Or add [?show_smarty_debug=1](#) to the page address (or [gshow smarty debug=1](#) if there are already other url parameters). See below examples.

**Smarty variables - page name**

*This code:*

```öff
{smarty name="eval" var="{$page}"}
```

*Would produce on this page:*
Smarty global variables - domain name

Global variables can be accessed too, such as the domain name -

This code:

```plaintext
{smarty name="eval" var="{$smarty.server.HTTP_HOST}"}
```

 would produce on this site:

doc.tiki.org

Preferences - metatag keywords

This code:

```plaintext
{smarty name="eval" var="{$prefs.metatag_keywords}"}
```

 would produce on this site:

documentation, tiki, tikiwiki, document, help, install, wiki syntax
