

# Plugin Snarf

Use this [wiki plugin](#) to include the body (HTML) text at the URL given in the `url` argument. It is similar to [Integrator](#).

## Parameters

Display the contents of another web page

Introduced in Tiki 1. Required parameters are in **bold**.

[Go to the source code](#)

Preferences required: `wikiplugin_snarf`

| Parameters | Accepted Values   | Description   | Default | Since |
|------------|-------------------|---|---------|-------|
| <b>url</b> | url               | Full URL to the page to include.  |         | 1     |
| cache      | int               | Cache time in minutes. Default is to use site preference, Set to for no cache.                                |         | 5.0   |
| colors     | text              | Syntax highlighting to use for code snippets (Plugin Code is used for this)                                   |         | 3.0   |
| ajax       | text              | Text to click on to fetch the URL via Ajax  |         | 6.0   |
| regex      | text              | PCRE-compliant regular expression pattern to find the parts you want changed                                  |         | 1     |
| regexres   | text              | PCRE-compliant regular expression replacement syntax showing what the content should be changed to            |         | 1     |
| ishtml     | (blank)<br>1<br>0 | Set to Yes (1) to display the content as is instead of escaping HTML special characters (not set by default). |         | 3.0   |
| ln         | (blank)<br>1<br>0 | Set to Yes (1) to add line numbers to code snippets (not shown by default)                                    |         | 3.0   |
| rtl        | (blank)<br>1<br>0 | Switch the text display from left to right to right to left   |         | 3.0   |
| wiki       | (blank)<br>1<br>0 | Parse wiki syntax within the code snippet (not parsed by default).  | 0       | 3.0   |
| wrap       | (blank)<br>1<br>0 | Enable/disable word wrapping of snippets of code (enabled by default)   | 1       | 3.0   |

Arbitrary [regex](#) replacement can be done on this content using `regex` and `regexres`, which are used as the first and second arguments to `preg_replace` PHP function, respectively, after pulling out just the `<body>` data.

## Examples

```
{SNARF (url="http://www.livejournal.com/users/rlpowell/2418.html" regex="/.*<!-- Content ->.*?<td>(.*?)</td>.*?</div>(.*?)<hr.*?<!-- \Content -->.*?/s"
regexres="<p>$1</p>$2")}[http://www.livejournal.com/users/rlpowell/2418.html] {SNARF}
```

To include the content of a page of another Tiki installation you can use the following syntax:

```
{snarf url="http://my.foo.bar/tiki-index_raw.php?page=ExamplePage" wrap="1" ishtml="1" cache="20"}
```

### Include Tiki.org Footer Page

```
{snarf url="https://tiki.org/tiki-index_raw.php?page=Shared_t_o_footer&clean" ishtml=1}
```

**Produces:**

(currently output is "broken" in Tiki 20.x on this site )

## Shared\_t\_o\_footer
