Plugin Subscript

Use this wiki plugin to render characters as subscript text (slightly below the regular line of text and smaller). It is the equivalent of using `<sub></sub>` tags in HTML.

Parameters

There are no parameters required - only the text between the `SUB` tags is needed.

Examples

Basic Example

This code, \( \text{This is regular text} \{ \text{SUB}() \} \text{and this is subscript text} \{ \text{SUB} \} \) produces: \( \text{This is regular font and this is subscript} \)

Example with Formatted Subscript

This code, \( \text{This is regular text} \{ \text{SUB}() \}' and \text{this is italic subscript}'' \{ \text{SUB} \} \) produces: \( \text{This is regular text and this is italic subscript} \)
