Plugin Superscript

Use this wiki plugin to render characters as superscript text. It is the equivalent of using `<sup></sup>` tags in HTML.

Parameters

There are no parameters required - only the text between the `SUP` tags is needed.

Examples

Basic Example

This code:

This is regular text{SUP()} and this is superscript{SUP}

Produces:

This is regular font and this is superscript

Example with Formatted Superscript

This code:

This is regular text{SUP}'' and this is italic superscript''{SUP}

Produces:

This is regular text and this is italic superscript
