Plugin TrackerToggle

Introduced in [Tiki7](#)

This [wiki plugin](#) utilizes jQuery to toggle the visibility of an HTML element (like a div) depending on the value of a field. This plugin can be used in [Pretty trackers](#) (but it is not meant to be used with [pluginLIST](#)). This plugin permits [Display logic](#).

Parameters

Adjust the visibility of content based on a tracker field's value, possibly dynamically

Introduced in [Tiki 7](#). Required parameters are in **bold**.

[Go to the source code](#)

Preferences required: `wikiplugin_trackertoggle`, `feature_jquery`, `feature_trackers`

Parameters	Accepted Values	Description	Default	Since
id	text	HTML id of the element that is toggled		7.0
value	text	Value to compare against.		7.0
fieldId	digits	Numeric value representing the field ID tested.		7.0
visible	(blank) y n	Set whether visible when the field has the value.	n	7.0
itemId	digits	Use the field of specific item. The URL param itemId is used if this parameter is not set.	0	7.0

Note

- Category needs `categId` not `categName` to match
- If you use a field more than once in a template (e.g., `{ $f_180 }`) only the first one on the page will be functional
- Only one plugin TRACKER of the same `trackerId` may appear on the page
- Only fields with a text value or checkbox (y/n) are functional prior to [Tiki11](#)

Examples

Radio buttons

This code will show the div *success* only if the field 206 has the value "Show". When the field is not set yet, the div is not displayed.

```
{DIV(id="success")}Congratulations! The "success" div now shows.{DIV} {trackertoggle fieldId="206" value="Show" visible="y" id="success"} { $f_206 }
```

Result:

You do not have permission to insert an item

Show only if checkbox is checked

This code will show the div 'checkbox' only if the checkbox is checked. When the box is not checked, the div is not shown

{DIV(id="checkbox")}The checkbox div{DIV} {trackertoggle fieldId="180" value="y" visible="y" id="checkbox"} Checkbox:
{\$_180}

Show unless checkbox is checked

Will show the div until the checkbox is checked.

{DIV(id="checkbox")}The checkbox div{DIV} {trackertoggle fieldId="180" value="y" visible="n" id="checkbox"} Checkbox:
{\$_180}
