

Plugin Wanted Pages

This [wiki plugin](#) lists the location of links to pages that have not been created yet ("wanted pages"), sorted either by wanted page or by page where the link is found.

Parameters

Show location of links to pages not yet created

Introduced in Tiki 1.

[Go to the source code](#)

Preferences required: `wikiplugin_wantedpages`

| Parameters | Accepted Values | Description | Default | Since |
|------------------------|-------------------------------------|--|-------------------|-------|
| (body of plugin) | | Custom level regex. A custom filter for wanted pages to be listed (only used when <code>level="custom"</code>). Possible values: a valid regex-expression (PCRE). | | |
| <code>splitby</code> | | The character by which ignored patterns are separated. | <code>+</code> | 1 |
| <code>collect</code> | (blank) from to | Collect either originating (from) or wanted pages (to) in a cell and display them in the second column. | <code>from</code> | 1 |
| <code>ignore</code> | | A wildcard pattern of originating pages to be ignored. (refer to PHP function <code>fnmatch()</code> for details) | | 1 |
| <code>skipalias</code> | (blank) 1 0 | Whether to skip wanted pages that have a defined alias (not skipped by default) | 1 | 12.1 |
| <code>skipext</code> | (blank) 1 0 | Whether to include external wikis in the list (not included by default) | 0 | 1 |
| <code>debug</code> | (blank) 0 1 2 | Switch on debug output with details about the items (debug not on by default) | 0 | 1 |
| <code>level</code> | (blank) custom full strict | Filter the list of wanted pages according to <code>page_regex</code> or custom filter. The default value is the site's current <code>page_regex</code> . | | 1 |
| <code>table</code> | | Multiple collected items are separated in distinct table rows (default), or by comma or line break in one cell. | <code>sep</code> | 1 |

Notes

The data for this plugin is taken from the table `'tiki_links'`.

1. Link Syntax - In order for the `'tiki_links'` table to be populated it is important that the `((page_name))` syntax be used when referencing an internal wiki page. It is possible to create a link to an internal wiki page using the syntax `[page_name]`, but that syntax should be avoided, and it will not produce data in the `'tiki_links'` table.

2. Best Results - for best results, enable the WikiWordsPlugin, I found that if this plugin is not enabled, several desired page links will be recorded in the 'tiki_links' table, but not displayed in the list result of this plugin.
3. Also note that this plugin may produce undesired results when page aliases are used.

Examples

Wanted pages can be displayed two ways:

This code:

```
{WANTEDPAGES(skipext="1" table="co" level="custom")}{[A-Za-z0-9_]}(\.: A-Za-z0-9, \-)*([A-Za-z0-9_]){WANTEDPAGES}
```

Will produce on this site:

| LIST - OUTPUT command | Tiki16 |
| LIST - display | Tiki16 |

| | |
|--|--|
| LIST - format command | output The simplified lower case output plugin-like format can be used ie without separate opening and closing OUTPUT tags since any body content would be ignored when a separate wiki page template is used. Also the use of the FORMAT commands allows individual objects to be &#039;formatted&#039; ; and then referenced in the various OUTPUT methods - see LIST - format command for more details. optional |
| LIST - output command | template 296 A simple built-in templating method can be used by setting the OUTPUT template parameter. |
| See: LIST - output command | |
| Note: by placing Wiki syntax directly in the OUTPUT body content, along with the required objects to be displayed, the command allows a template for each row of output to be constructed within the LIST plugin itself., table 309 296 Note that the column plugins (within OUTPUT) are converted to a data array sent to the template. The table formatting uses smarty formatting and provides the same capabilities. | |
| See: LIST - output command, medialist 309 296 Sample using the default media list formatting. | |
| See: LIST - output command 27, carousel 309 296 Sample using the default Bootstrap Carousel formatting. | |
| See: LIST - output command 28 | |
| LIST - sort command | sort Allows the resultant list of objects to be sorted in a specified order. |
| Please be warned that sorting is normally based on string. if you are trying to sort by numbers, make sure all your numbers are of the same number of digits. Otherwise 2 will be larger than 12 if doing a string sort. | |
| see aswell: LIST - sort command | |
| --- | |
| There is aswell a parameter &#039;sort&#039; ; that can be used in the command &#039;column&#039; ;. optional | |
