

This feature is no longer supported or relevant because browsers now have spellchecking, and that's where it should be handled. You can add grammar checking to Firefox with <http://www.afterthedecline.com/>

Spellchecking

Tiki contains an optional spellchecking ability that uses its own dictionary. When entering wiki text in specific [features](#), Tiki can automatically identify misspelled words and offer suggestions.

The language-specific dictionary used by the spellchecker is an additional database table that can be [downloaded from Sourceforge](#) and added to your database.

Spellcheck FAQs

Q: Why does spellcheck flag all capitalized words as incorrect?

A: Because it has been broken for a *long* time. [See this post](#) from 2007.
