Problems with LIST filter Categories

▲ 05 May 2025

Cant seem to get results when using a category filter in a LIST() filtered by other criteria. The online example is simply `{filter categories="ID"}` (same for deepcategories) I've only had results using the above without quotations. and also not in conjunction with any other LIST parameters. ex. (left out curly brackets because parser confusion) `LIST() list max="100" filter field="tracker_id" content="2" filter field="tracker_field_Name" content="NOT " filter deepcategories=9 sort mode="tracker_field_Name_asc"` (display actions) LIST Am I employing it incorrectly? Can anyone give me a syntactical example of use to further narrow LIST results? It would be a great benefit to be able to restrict output to certain categories. Any help appreciated

Fatal error rendering template resource error.tpl

▲ 04 May 2025

v28.3 Hi all, I found the Tracker History function, but encountered the below error in results for some items. All Tracker items use the same fields and are in the same Tracker ID. Fatal error rendering template resource error.tpl **Error: Too late to modify headers. Headers already sent by output headers() called at** `/home/mysite/public_html/temp/templates_c/en_social^1545074648a2db9b7de33c615f1f111a0b3951e5_0.file_header.tpl.php:441` in `/home/mysite/public_html/lib/headerlib.php:172` **Stack trace:** (detailed report after) Related: I was seeking a way to rollback Tracker entries to previous versions but all i see is a history. Is there a way to rollback?

Constructing local links issue with formatting

▲ 01 May 2025

V28.3 When constructing local links from URL stored as Tracker data, Certain symbols are being changed to a percent encoding format when returned? For whatever reason, Tiki is not accepting that format as valid for local links. Any way to prevent the change? https://mysite.com/tiki-view_forum_thread.php?comments_parentId=18 yields the below result, (even

though on [hover](#); the link is formatted correctly.) https://mysitecom/tiki-view_forum_thread.php%3Fcomments_parentId%3D18 which generates a 404 ideas?

[embed forum in a wiki page](#)

▲ 30 Apr 2025

is there a [clean](#); way to embed a forum or forum topic in wiki page, that doesn't involve iFrames etc?

[Toolbars missing \(on wiki pages\)](#)

▲ 30 Apr 2025

Anyone notice after an upgrade to 21.12 that [Toolbars](#); are missing on **newly created** wiki pages? (cleared cache, re-indexed several times) when I try to use markdown (insert manually, e.g. bold), after the save it reverts to html. Toolbars are there on existing pages, edits work (toolbar does not disappear).

[Linking to Forum Topic in Wiki Page by Topic Title](#)

▲ 29 Apr 2025

V28.3 How to link to a Forum Topic WITHOUT using [parentId=XX](#) ie.

(https://mysite.com/tiki-view_forum_thread.php?forumId=1&comments_parentId=1) But there must be a cleaner way to construct such a link involving [comments_title](#)? Thinking it might look like this? [tiki-view_forum.php?forumId=1&comments_title=My+Topic](#) (the above just returns me to the forum's main topic list) ideas?

[Apply Wiki Template to Multiple Pages](#)

▲ 27 Apr 2025

V28.3 Is it possible to apply a Wiki template to multiple Wiki pages at once? Perhaps based on the Categories they occupy or some other filter? Right now the template for each page has to be applied on a pre-page basis, but my templates evolve rapidly and it is time consuming to return to each page to apply each new template version. Have I missed an option, is there a workaround? Or is this not a feature?

[LIST filter using wiki page name](#)

▲ 25 Apr 2025

Hi. First time poster. I have a wiki page that lists a number of tracker fields from a single item, using the plugin LIST. I would like to filter tracker items using the wiki page name, to keep from having to manually update the filter criteria for the LIST command in the source. I'm not sure about the syntax for revealing wiki page name. What I'm trying to accomplish would look something like this; {filter field="tracker_field_name"; exact={wiki_page_title}} If there is a different approach I should be using please let me know.

[Links not working in Top Pages module](#)

▲ 22 Apr 2025

I recently upgraded to 28.3 and have a problem I have not been able to find a solution for as yet. On the right hand side of my site I have several modules. The module Top Pages has links with this type of formatting: <https://mywebsite.org/tiki-index.php?page=Seasons> When I click on the link nothing happens. The module Latest Changes just below it has this type of link formatting: <https://mywebsite.org/Seasons> When I click on this link it works fine. Does anyone have an idea of what may have caused this? I'm guessing I've changed a preference I shouldn't without remembering or recording it. Would be nice to be able to modify the module to change the link format. Thanks in advance!

[Blank screen on tiki-admin_categories.php after upgrade](#)

▲ 19 Apr 2025

Hello everyone, I have a problem that I can't resolve! Description : I installed Tiki 27.0 in October 2024, since then I have upgraded 2 times, first to 27.1 without any problems after upgrade. On April 12, I upgraded to version 27.2. This time, the only problem I encountered after checking all was the category administration do not displayed. It's simply a blank screen. I've checked the php.ini server memory is 128mg OK, I've checked the permissions on files OK. I've also redone the upgrade steps to see the error messages, but everything's OK. It's only the admin action (tiki-admin_categories.php) that doesn't work. Everything else works fine. Actually, I'm not find a solution for that. In last resort, I could go back to the previous version 27.1 and restore the database and the backup file. Note: the site is not currently online! It's still under development. Thank for your help
