User Mentions

Introduced in Tiki20

This feature converts any wiki syntax written as `@username` in all text areas to the existing actual Registered user link.
In order to *mention* users on Wiki pages etc. a Tiki admin needs to enable "Tagging users" preference under *User Features > User Account Features* on the **User Settings** (tiki-admin.php?page=user) control panel first.

Examples

Example 1

This code:

    @luci

Would produce on this site:
@luciash d' being □
