Web Services
Since Tiki3, there is a new PluginWebservice to manage web services, and an admin panel to set up the feature.

Usage
See the following video for an introduction of Tiki webservices in Tiki3

Admin interface

![Webservice Registration](image)

Discover and register web services to allow direct use in wiki pages.

Enter the URL of a web services returning either JSON or YAML. Parameters can be specified by enclosing a name between percentage signs. For example: %name%, %service% and %template% are reserved keywords and cannot be used.

How to register a web service
See Webservice Registration

How to use
See PluginWebservice
