Wysiwyg Editor Admin

Since **Tiki2**, Tiki includes a Wysiwyg *(What You See Is What You Get)* editor: through the integration of **Fckeditor** in the Wiki feature. Since **Tiki6**, this wysiwyg mode is powered by CKeditor, the new version family of the same engine.

It can be enabled at Admin -> General panel.

Please note that **WYSIWYG** doesn't work with **Edit by Section**.

---

**Description of Wysiwyg Editor Features**

<table>
<thead>
<tr>
<th>Feature Description</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wysiwyg Editor is optional:</td>
<td>If disabled, the normal editor will not be available anymore.</td>
</tr>
<tr>
<td>... and is displayed by default:</td>
<td>If checked, it will be the default editor when creating or modifying a wiki page.</td>
</tr>
<tr>
<td>Content is parsed like wiki page:</td>
<td></td>
</tr>
<tr>
<td>Content is partially parsed:</td>
<td></td>
</tr>
<tr>
<td>Toolbar skin:</td>
<td>default</td>
</tr>
</tbody>
</table>

"Content is parsed like a wiki page" means all content of the wiki page is parsed, then **_bold_** is shown as bold in parsed result, and is still displayed **_bold_** in the source of the wiki page. Then you can mix wysiwyg edition and wikistyle code.
"Content is partially parsed"

- Parsing of links
- Parsing of images and generally what is included in `{ }`
- Parsing of wiki-plugins

**Toolbar skin:**
It selects the theme styles for icons, colors, etc. used by Wysiwyg editor.

**Toolbar content:**
Shows a list of features that will be loaded with the editor. For more information on these features, check the FCKEditor Documentation at http://www.fckeditor.net/
