

Auto TOC

Starting in [Tiki12](#), a new feature to allow adding an automatic Table Of Contents ("Auto TOC") has been added to the Wiki. And starting in [Tiki23](#), you can have more options via [PluginAutoTOC](#)

Enable it

Auto-toc can be enabled as admin through the admin panel in "**Admin home > Wiki > General Preferences (Tab) > Section *Automatic table of contents* (Page Display before Tiki 15) > Wiki auto-toc**"

You can also choose:

- the default for each page (which can be overridden per page)
- If the top TOC should be inserted into the page content or not
- Position left or right
- Offset from the top

Automatic table of contents

Wiki auto-toc	<input checked="" type="checkbox"/>  
Table of contents default	Off   
Inline auto-toc	<input checked="" type="checkbox"/>   
Table of contents position	Right  
Table of contents offset	10   pixels

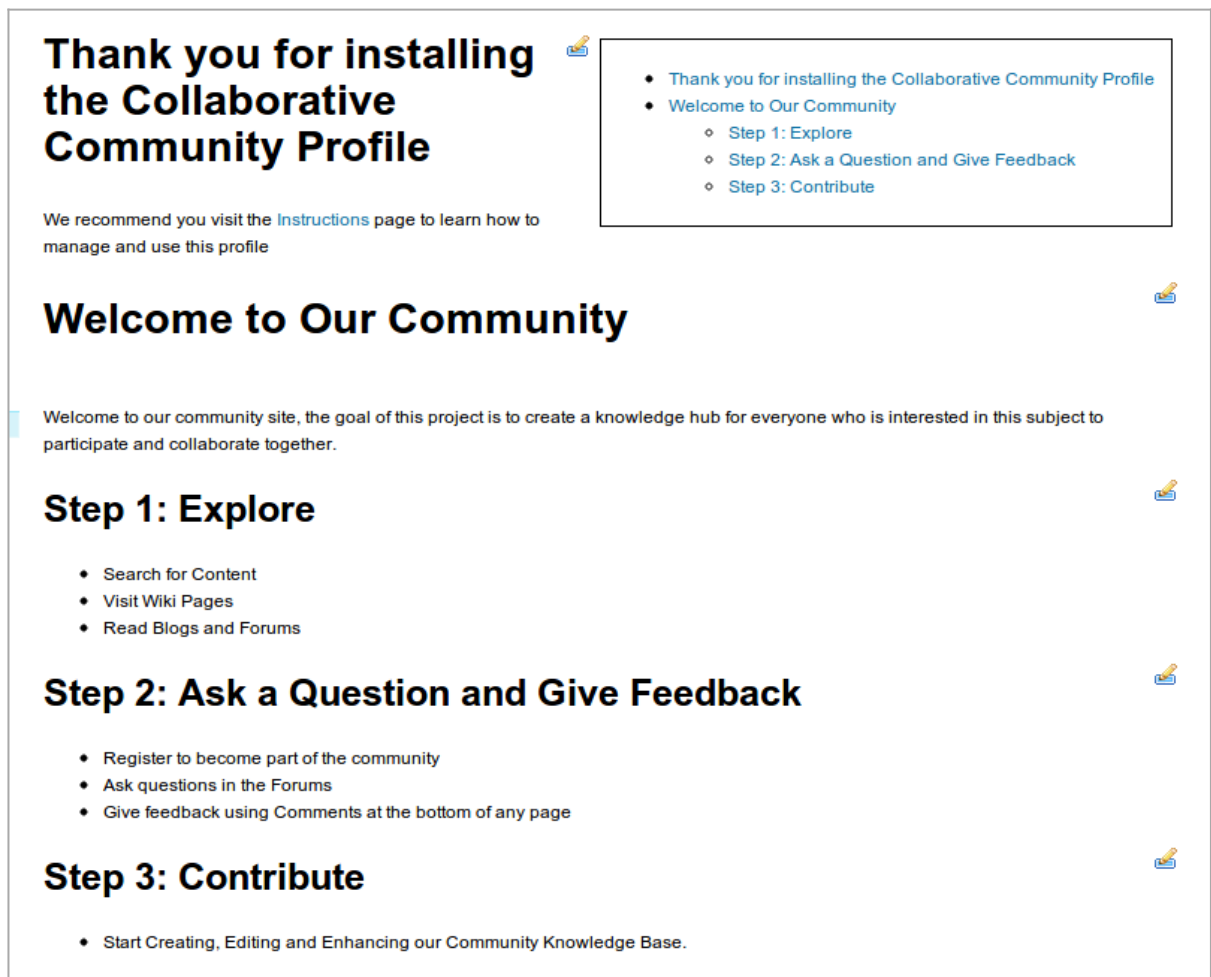

Click to expand

Auto TOC is not included in the print view of the page.

Usage

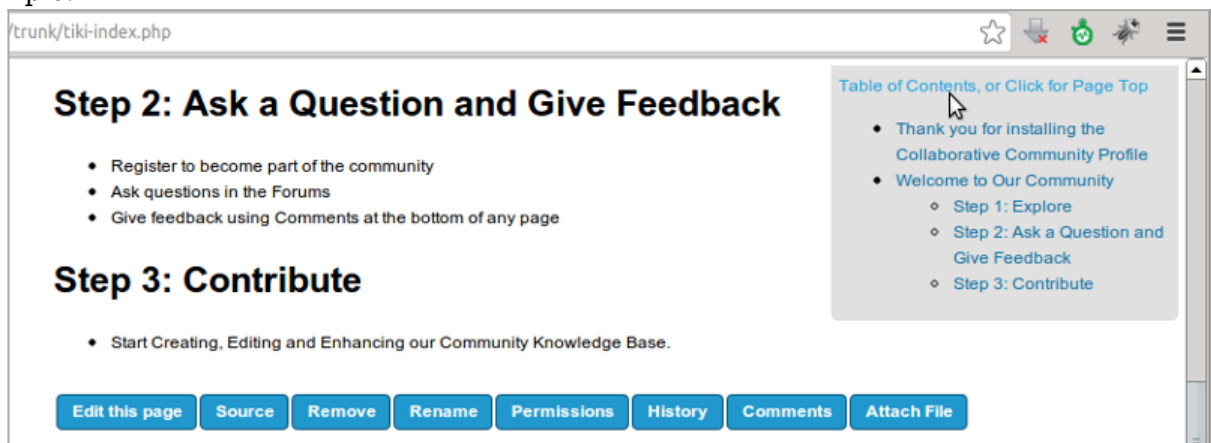

Auto-toc will add the TOC in two places.

1. A static TOC located at the top of the page. The TOC is inserted into the page content at runtime.
 - Example:

Click to expand

2. A floating TOC, located at the top of the browser window. This TOC is only visible when you scroll down past the top of the page.
 - Example:

Click to expand

Additionally, you can also see it in action in the screencast below.

```
{flash type="url" movie="https://dev.tiki.org/display372" width="550" height="500"}
```

Disable it in some pages

You can disable it in some wiki pages. In order to do so, edit the page, go to the properties tab, and set **"Page display options > Automatic Table of Contents generation"** to **"off"**:
