

This page and pages like it should be moved to <http://profiles.tiki.org> since it's about how to configure various features to solve a use case. Please see [where](#).

What is a workflow?

Entity-based vs Activity-based workflows:

<http://wiki.zope.org/zope3/TryingToUnifyWorkflowConcepts>

For Activity-based workflows, Tiki offers Galaxia [Workflow](#). But this overkill for entity-based workflows.

One possibility is to use Wiki Page Staging and Approval.

The other is to setup your document workflow using [Wiki](#) pages, and have various [groups Watching](#) the [categories](#). A [tutorial](#) would be nice here.

Profile: [Document_Workflow](#)

Dev: [Approval Workflow](#)
