

Tiki Trackers are a powerful generic database builder, and there are many ways to interact with the data, such as:

Active

(alphabetically sorted)

- [PluginCustomSearch](#)
- [PluginGanttChart](#)
- [PluginList](#)
- [PluginListExecute](#)
- [PluginMap](#)
- [PluginPivotTable](#), which gets [Plotly](#)
- [PluginTrackerCalendar](#)
- [PluginChartJS](#)
- [Simple vertical timeline](#)
- [PluginKanban](#)

Besides [PluginTrackerCalendar](#), you can also see through a Calendar tracker items associated with a standard tracker calendar. See:

- [Date-Tracker-Fields#Date_REAL_AMP_Time_Calendar_Item_Tracker_Field](#)

And of course:

- [PluginTracker](#)
- [PluginTracker Advanced](#)
- [PluginTrackerCalendar](#)
- [PluginTrackerComments](#)
- [PluginTrackerFilter](#)
- [PluginTrackerIf](#)
- [PluginTrackerItemCopy](#)
- [PluginTrackerItemField](#)
- [PluginTrackerList](#)
- [PluginTrackerList To PluginList Converter](#)
- [PluginTrackerPasscode](#)
- [PluginTrackerPrefill](#)
- [PluginTrackerQueryTemplate](#)
- [PluginTrackerStat](#)
- [PluginTrackerTimeline](#)
- [PluginTrackerToggle](#)
- [PluginTrackerToggleExample1Template](#)

Planned

- [Diagram](#) (should be partially populated from data)

Related

You can also export it (all or some fields and items, eventually filtered by some criteria), edit the data elsewhere, and re-import it if needed later on, etc. See:

- [Import Trackers](#)
- [Export trackers](#)
- [Tracker Tabular](#)

And you can edit data inline in forms, if you enable the corresponding parameter to do so. See:

- [Tracker Inline edit](#)
