

There are several ways to import database-like structures (Trackers with their Tracker fields) and data (Tracker items) into your website. This page will give you a quick overview of the related capabilities in Tiki.

Import Trackers

There are several ways to import a tracker, its fields and its data:

1st Way: Import Tracker using its structure (own code)

Export Selected

This will open a window with the code you need to copy, then paste in to the **Import Tracker Fields** tab.

Import Tracker data

To import data, you can import data through the other interface:

Click to expand

In order to get the right syntax for the file, you can export your tracker data first, so that you can see an example of how columns are data are formatted. See [Export Trackers](#).

Use from remote sources

You can alternatively use tracker data from remote sources through the **ODBC** read/write support added in [Tiki23](#).

See [ODBC](#)
