Minified scripts

This is necessary for use case:

- Dev: Testing Use Case: Dev wants to write a series of related and very similar tests

Often, we need to use the same assertion check, or the same initialisation code, or the same or almost sequence of steps in different tests. In cases like that, it's better to write one bit of code or test specification and then invoke it in different tests.

With phpunit+Selenium, this is trivial to do. You just write a PHP method and call it from different tests.

With TikiTests, the only place where you can do this easily, is for specifying the start state of the app. Here, you may be able to reuse the same profiles or DB dumbs across different tests. But that's all. You can't reuse assertions, and you can't reuse sequences of screens. Well, you could, but you would have to add a lot of new features to TikiTests to support that.
