

This is a [stub](#)

It makes a graph with all the linked pages from your page. Works well with [Tiki3 LTS](#), but not with [Tiki6 LTS](#).

Example 1:

Example 2:

Create a page called "Menu", and add 4 links to other pages (one of them, called "Instructions"). Then add a link in your homepage to the same page "Instructions". Then, in the homepage, add this syntax:

```
{WIKIGRAPH(level=>1)}Menu{WIKIGRAPH}
```

You will end up seeing something like this:

The screenshot shows a Tiki Wiki homepage. At the top, there's a navigation bar with icons for editing, printing, saving, viewing, and a dropdown menu labeled 'Backlinks...'. The main content area is titled 'HomePage' and contains a graph diagram. The graph shows a central node 'Menu' with four outgoing arrows to 'community', 'homepage', 'Instructions', and 'wiki help'. The 'homepage' node has an arrow pointing to 'Instructions'. Below the graph, there's a message: 'Thank you for installing the Collaborative Community Profile' and a recommendation to visit the 'Instructions' page. On the right side, there's a 'Menu' section with a list of links: 'Instructions', 'homepage', 'community', and 'wiki help'. Below this, there's a note: 'This is just a sample menu - edit it'. At the bottom right, there's a 'My account' section with a list of links: 'Home Page', 'Last changes', 'Forums', and 'FAQS'.

You need [GraphViz](#)

See in action here:
