Module category_transition

Introduced in Tiki4

Displays controls to trigger category transitions and change the page's state according to predefined rules.

Parameters

Displays controls to trigger category transitions and change the page's state according to predefined rules.

Go to the source code
Preferences required: feature_category_transition

Parameters
no parameters

Here is the look of the UI when there is a categorized object shown in the content area (the "workflow" title is a sample custom title for the module).

The module will not show when there isn't any categorized object with category transitions available. Also meaning that it currently doesn't appear when you are at the final state...
