

Module Logo ‐ the site logo module

This [module](#) displays the site logo, site title and site subtitle, or any combination of these. The information for the logo module can be managed on the Admin Modules page (tiki-admin_modules.php) or the Look & Feel admin page (tiki-admin.php?page=look). To use alternative logo modules, containing more or less content depending on screen size, configure the modules on the Admin Modules page rather than entering information on the Look & Feel admin page.
