You are an experienced sysadmin. You manage hundreds of systems. What should you know about Tiki?

- Tiki is a standard LAMP app: [Requirements](#)
- To check if a server is OK: [Server Check](#)
- Lifecycle is: [Versions](#)
- To ease management, there is a CLI tool: [Manager](#) (along with a web interface)
- For bigger projects, it's a good idea to switch [Unified Index](#) to Elasticsearch
- Project is Open Source: LGPL 2.1
- Project does not use plugins but some extra libs come from Composer
- Source code is managed here: [https://gitlab.com/tikiwiki/tiki](https://gitlab.com/tikiwiki/tiki)
- Docker: [https://hub.docker.com/r/tikiwiki/tikiwiki](https://hub.docker.com/r/tikiwiki/tikiwiki)

Other info

- It is the central part of [https://wikisuite.org/](https://wikisuite.org/)

Future project

- [https://doc.tiki.org/Firewall](https://doc.tiki.org/Firewall)
