

In Tiki19, permissions were [further improved](#)

See also: [Permissions](#) and [Module permissions](#)

Victor wrote:

*Calling*

```
Perms::get(array('type' = 'trackeritem', 'object' = ID))
```

*will return permissions in this order:*

- 1. TrackerItem Object permissions (if any).*
- 2. TrackerItem Category permissions (if item is categorized and permissions are available)*
- 3. Parent Tracker Object permissions (if any).*
- 4. Parent Tracker Category permissions (if tracker is categorized and there are any permissions)*
- 5. Global permissions.*
