In Tiki19, permissions were further improved

See also: Permissions and Module permissions

Victor wrote:

Calling

```perl
Perms::get(array('type' => 'trackeritem', 'object' => ID))
```

will return permissions in this order:

1. TrackerItem Object permissions (if any).

2. TrackerItem Category permissions (if item is categorized and permissions are available)

3. Parent Tracker Object permissions (if any).

4. Parent Tracker Category permissions (if tracker is categorized and there are any permissions)

5. Global permissions.
