

Plugin Security

By default, Wiki Syntax is designed to be safer than HTML. If we let users just use any HTML & Javascript (which is , some could do nasty things like [XSS](#)

Thus, when a plugin is potentially insecure, it must be approved by someone with appropriate permissions.

 **PLUGIN EXECUTION PENDING APPROVAL**

This plugin was recently added or modified. Until an editor of the site validates the parameters, execution will not be possible. You are allowed to:

- View arguments
- Execute the plugin in preview mode (may be dangerous)
- Approve the plugin for public execution

Details: REDIRECT

Task

This plugin's body is empty.

The permissions involved are:

Permission	Description
tiki_p_plugin_approve	Can approve plugin execution
tiki_p_plugin_preview	Can execute unapproved plugin
tiki_p_plugin_viewdetail	Can view unapproved plugin details

Plugin Approval

See [Plugin Approval](#)

Plugin Manager

Plugins can be enabled or disabled on a sitewide basis by an admin. So if you don't need it, turn it off.
