

## Plugin A Name

This [wiki plugin](#), available since Tiki1, creates an anchor in a wiki page that can be linked to. Use in conjunction with the [PluginAlink](#), which creates the link to the anchor.

Starting with Tiki release 2.0, Tiki will automatically create anchor points for all headings in a wiki page. You can use the [PluginAlink](#) to link to any heading on a wiki page *without* having to use a corresponding ANAME plugin.

### Parameters

Create an anchor that can be linked to

*Introduced in Tiki 1.*

[Go to the source code](#)

Preferences required: `wikiplugin_aname`

### Parameters

(*body of plugin*) - The name of the anchor.

*no parameters*

### Usage

To take use this plugin in a wiki page, use the syntax:

```
{ANAME()}anchornname{ANAME}
```

In the generated XHTML for your webpage, Tiki will create the following anchor:

```
<a id='anchornname'></a>
```

### Notes:

- If you include spaces in the anchor name, Tiki will convert the spaces to underscores (\_). For example, `{ANAME()}my custom anchor{ANAME}` will render as: `<a id='my_custom_anchor'></a>`.
- Starting with Tiki release 2, Tiki generates the anchor using the `id` attribute. In prior releases, Tiki used the HTML `name` attribute (`<a name='anchornname'></a>`).

### Example

#### Aname Plugin Usage

```
{ANAME()}
```

`anchornname` --put the name of the anchor here. Use this same name for the `aname=` parameter in the [Plugin Alink](#) (see just below).

```
{ANAME}
```

ANAME example: `{ANAME()}anchornname{ANAME}`

#### Alink Plugin Usage

```
{ALINK()
```

```
aname=anchorname <-- put here the name of the anchor you created using the Plugin Aname!
```

```
)}
```

```
link text <-- put here the text to appear as the link.
```

```
{ALINK}
```

ALINK example: {ALINK(aname=anchorname)}link text{ALINK}

or rather, I only work so

ALINK example: -+{ALINK( fname="anchorname" pagename="wiki pagename")}link text{ALINK}+

## Demonstration

To jump down to the anchor at the bottom of the page click [HERE](#). <-- Here is where I put the ALINK plugin in this page.

.

.

.

.

.

.

.

.

.

.  
. .  
  
**The anchor is here.** <-- I put the `ANAME` plugin at the beginning of this line. Now you can click [HERE](#) to jump to the anchor I put at the top of the page (you can't see where that one is unless you look into the page editor 😊)
