

Plugin Articles

Use this [wiki plugin](#), available since Tiki1, to include any number of articles into a wiki page. For a plugin that includes components of a single article, see [PluginArticle](#). This is particularly useful if you want to include the top 2 articles into your homepage, but being anyway able to write some custom Wiki text. For a quick summary of a list of articles you can also use [PluginModule](#) to display [Module last_articles](#).

Parameters

Introduced in Tiki 1.

[Go to the source code](#)

Preferences required: feature_articles, wikipugin_articles

Parameters	Accepted Values	Description	Default	Since
urlparam	text			6.0
dateEnd	date	Latest date to select articles from. (YYYY-MM-DD)		5.0
lang	lang	List only articles in this language		1
max	int	The number of articles to display in the list (use -1 to show all)	50	1
periodQuantity	digits	Numeric value to display only last articles published within a user defined time-frame. Used in conjunction with the next parameter "Period unit", this parameter indicates how many of those units are to be considered to define the time frame. If this parameter is set, "Start Date" and "End Date" are ignored.		1
periodUnit	(blank) hour day week month	Time unit used with "Period quantity"		1
dateStart	date	Earliest date to select articles from. (YYYY-MM-DD)		5.0

<code>start</code>	int	The article number that the list should start with (starts with first article by default). This will not work if Pagination is used.	0	1
<code>topic</code>	text	Filter the list of articles by topic. Example: <code>!topic+topic+topic</code>		1
<code>containerClass</code>	Valid CSS class	CSS class to add to the containing "div.article" (default: <code>"wikiplugin_articles"</code>)	wikiplugin_articles	1
<code>largefirstimage</code>	(blank) y n	If set to <input checked="" type="checkbox"/> (Yes), the first image will be displayed with the dimension used to view of the article	n	6.0
<code>translationOrphan</code>	alpha separator: <code> </code>	User- or pipe-separated list of two-letter language codes for additional languages to display. List pages with no language or with a missing translation in one of the language		1
<code>overrideDates</code>	(blank) y n	Whether to comply with the article type's "show before publish" and "show after expiration" settings (not complied with by default)	n	1
<code>quiet</code>	(blank) y n	Whether to not report when there are no articles (no reporting by default)	n	1
<code>fullbody</code>	(blank) y n	Whether to show the body of the articles instead of the heading (not set by default).	n	5
<code>actions</code>	(blank) y n	Whether to show the buttons and links to do actions on each article (for the actions you have permission to do	n	6.1

sort	random or column names to add_asc_desc to: created, author, title, publishDate, expireDate, articleId, topline, subtitle, lang, linkto, authorName, topicId, topicName, state, size, heading, body, isfloat, useImage, image_name, image_caption, image_type, image_size, image_x, image_y, image_data, list_image_x, list_image_y, nbreads, votes, points, type, rating, ispublished	The column and order of the sort in <code>columnName_asc</code> or <code>columnName_desc</code> format. Defaults to <code>publishDate_desc</code> (other column examples are <code>title</code> , <code>lang</code> , <code>articleId</code> , <code>authorName</code> & <code>topicName</code>). Use "random" to have random items.	publishDate_desc 2.0
order	digits <i>separator:</i> <code>[]</code>	List of ArticleId that must appear in this order if present	9.0
titleonly	(blank) y n	Whether to only show the title of the articles (not set to title only by default)	1
usePagination	(blank) y n	Activate pagination when the articles list is long. Default is <code>n</code>	1
useLinktoURL	(blank) y n	Use the external source URL as link for articles.	1
categId	digits <i>separator:</i> <code>[]</code>	List of category IDs, separated by "%0". Only articles in all these categories are listed	1

<code>notArticleId</code>	digits separator: <code> </code>	List of article IDs to not display, separated by "%0"	5.0
<code>articleId</code>	digits separator: <code> </code>	List of article IDs to display, separated by " "	9.0
<code>topicId</code>	Valid topic IDs	Filter the list of articles by topic ID. Example: <code>!topicId+topicId+topicId</code>	2.0
<code>type</code>	Valid article types	Filter the list of articles by types. Example: <code>!type+type+type</code>	1

Fields displayed with the articles (author, nb of views, etc.)

To choose which fields to display on top of each article, go to Control panels - Articles - Article Types and tick/untick the chosen field -see <https://doc.tiki.org/Articles+Listing>

Example

In this example below, a wiki page is shown including the articles plugin, so that last articles are shown below the "! News" heading of the page.

This code:

```
{articles max="5" topicId="!5"}
```

Produced:

What can you find here ?
 This website hosts a part of the activity of that community. Take a look inside: check the latest Documentation effort at <http://doc.tikiwiki.org>, watch the [TikiMovies](#), wander in [Help](#). This website is very large, somewhat 'natural' and permissive in the collaboration protocol, so don't be surprised by some diversity in the 2300+ wiki pages that you can experience here 😊. You are welcome to participate. **Also Tiki security is important for us: Read [TikiSecurity](#) and feel free to help us making Tiki even more secure.**

Try it !
 You can test live [Demo at Opensourcecms.com](#) before you download.

Tips
 Visit [Tiki First Steps](#) on the top menu bar, to learn how to [Download](#), [Install](#) and do more ...

New to Tiki? Watch this 24' overview install. & config. video...
 By: Tiki Movies Fan on: Tue 10 Jul, 2007 18:54 CET (43 reads)

Are you new to Tiki? First of all, [Welcome to Tikiwiki CMS/Groupware](#) 😊

Many new users have arrived at Tikiwiki Community in the last months. This article is to tell you that you can get easily started by watching this basic introduction and overview 24 minutes video, featuring a quick Tikiwiki installation

When topic="!New+Events', only the articles that have not a topic News or a topic Events will be displayed. You can put as many topics you want by separating them with the character '+'.The character '!' means not - It can be only on first place. Do not put space around the separator.

Multilingualism

The multilinguism is managed on 2 aspects:

- If you have selected the multilingualism and best_language features, and when this plugin is inserted in a page that has a defined language, some articles can be filtered out. For each set of translations, when one article of this set has the same language as the page language, only this article in the set will be displayed. Please note that you can still see an article of another language, if this article is not in a set of translations or if this set of translations has no article in the page language.
- If you use the parameter lang, only the articles in this language will be shown
