

Plugin Backlinks

This [wiki plugin](#) will list all pages that link to a specific page in the site. Information about the pages may also be displayed.

Parameters

List all pages and tracker items that link to a particular page

*Introduced in Tiki 1.*

[Go to the source code](#)

*Preferences required:* feature\_wiki, wikiplugin\_backlinks

| Parameters                | Accepted Values                              | Description                                                                                              | Default                  | Since |
|---------------------------|----------------------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------|-------|
| <code>noheader</code>     | (blank)<br>0<br>1                            | With or without header (default is with header)                                                          |                          | 1     |
| <code>info</code>         | text<br><i>separator:</i> <code> </code>     | Pipe separated list of fields to display. ex: hits user                                                  |                          | 1     |
| <code>include_self</code> | (blank)<br>1<br>0                            | With or without self-link (default is without)                                                           | 0                        | 1     |
| <code>page</code>         | pagename                                     | The page links will point to. Default value is the current page.                                         | <a href="#">pagename</a> | 1     |
| <code>exclude</code>      | pagename<br><i>separator:</i> <code> </code> | Pipe-separated list of pages to be excluded from the listing, for example: <code>HomePage Sandbox</code> |                          | 1     |

Examples

Table

If page information (such as hits or user) is specified, then a simple table will be produced. So this code,

```
{backlinks page="Documentation" info="hits|user" exclude="SandBox"}
```

*Would produce on this site:*  
5 pages link to [Documentation](#)

| Page                                  | Hits   | User        |
|---------------------------------------|--------|-------------|
| <a href="#">All the Documentation</a> | 773984 | marclaporte |
| <a href="#">Tutorials</a>             | 245091 | marclaporte |
| <a href="#">Contacts</a>              | 39538  | marclaporte |
| <a href="#">설치</a>                    | 4405   | drsassafras |

One tracker item links to [Documentation](#)

- ● [Documentation](#)

Bullet list

If only the page name is to be listed, then a bulleted list is produced. So this code,

---

```
{backlinks}
```

*Would produce on this site:*

8 pages link to [PluginBacklinks](#)

- [All Plugins](#)
- [Wiki-Syntax Links](#)
- [Backlinks](#)
- [Liens](#)
- 링크 작성 위키문법
- 백링크
- [Statut de la traduction française](#)
- [Documentation Status](#)
