

Plugin Figlet

Introduced in [Tiki 24.0](#)

Use this [wiki plugin](#) to create FIGlets. A FIGlet text is a string, which is represented as ASCII art. FIGlet uses a special font format, called FLT (FigLet Font). By default, one standard font is shipped with the plugin. You have the option to define the maximum width of the output string and a font path.

Basic Usage

To display a text as a FIGlet provide a string and optionally a font. The text will then be displayed formatted as FIGlet (See example below).

Parameters

Introduced in [Tiki 24](#).

[Go to the source code](#)

Preferences required: `wikiplugin_figlet`

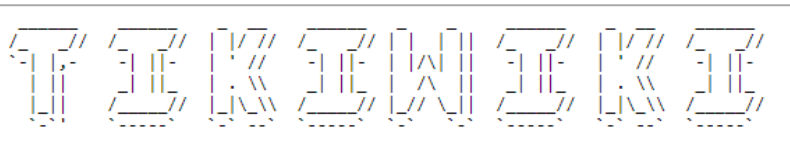

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		Content		
<code>font</code>	text	Path to "fif" font file. Find more fonts here http://www.figlet.org/fontdb.cgi		
<code>width</code>	int	Defines the maximum width of the output string in characters.		

Example

This code:

```
{FIGLET()}  
TIKIWIKI  
{FIGLET}
```

Would produce:
