

Plugin GDgraph

This [wiki plugin](#), available from [Tiki14](#) (and backported to [12.4](#)) displays a graph/chart as an image using x,y pairs of data placed in the plugin body.

It should be noted that the graphing capabilities of this plugin are quite simple and if access to server to load the R libraries is possible then more extensive graphing capabilities are possible with the [R plugin](#).

Parameters

Introduced in Tiki 14, backported to 12.4. Required parameters are in **bold**.

[Go to the source code](#)

Preferences required: `wikiplugin_gdgraph`

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		Comma-separated data (x,y) to be graphed. A useful option is to generate this data from a LIST or CUSTOMSEARCH using a .tpl template or trackerlist plugin placed in the body		
type	barvert barhoriz	Defines what ype of graph or chart is to be generated		14.0
alntag	text	Text for image alt tag	GDgraph graph image	14.0
height	digits	Sets the total height in pixels of the image generated to display the entire graph - if not set and type is barhoriz then the image height will be calculated from the number of x,y pairs, which is useful if the number of x,y pairs is not known eg they are generated using (say) a LIST, CUSTOMSEARCH or trackerlist plugin. The auto height option only works properly if the title is not shown.	0	14.0
width	digits	Overall width in pixels. Default value is 300 .	300	14.0
title	text	Displayed above the graph		14.0
