Plugin Img

Use this wiki plugin to display an image either inline or with styling and resizing. Images can be identified by URL address and by ID for images in Tiki file or image galleries or attachments on the Tiki site. The image can be styled and resized and can be included in a styled box with the image description or name displayed. Images can be set to enlarge on mouseover, or via colorbox, or in a separate web page.
Usage and Parameters

Here are some quick examples:

Pretty pears

Click here for the code...

Note: click on image or button to enlarge

Commit screenshot

Click here for the code...

Note: mouse over or tap (on touch devices) image to bring up a popup

Click here for the code...

Note: random image picked from a file gallery with styled frame

Parameters

Below are the parameters for this plugin, categorized into tabs:

Plugin Manager error: img plugin not found

Plugin Manager error: img plugin not found

Plugin Manager error: img plugin not found

Plugin Manager error: img plugin not found

Plugin Manager error: img plugin not found

Plugin Manager error: img plugin not found

Plugin Manager error: img plugin not found

Examples

Image aligned right and hyperlinked

This code:

```
{img attId="39" imalign="right" link="https://tiki.org" alt="Panama Hat"} This text after the img code
will nevertheless be on the left because the image is right aligned. The text will also wrap around the
image since the ''imalign'' parameter "floats" the image.
```

Would produce this on this site:

This text after the img code will nevertheless be on the left because the image is right aligned. The text will also wrap around the image since the *imalign* parameter "floats" the image.

The target of the link will always be "_blank".

Add several images in a row

This code:

```
{img attId="57|58|59" desc="desc" alt="Sample Images" thumb="y" stylebox="float: left; margin-
right:10px"}
```

This might not be possible with all versions earlier than Tiki 4.

Would produce this on this site:

Apples   Oranges   Apples and
                             oranges

Different image for a thumbnail

Below is an example of using a thumbnail image (apples) that is different than the image brought up when the thumbnail is clicked (oranges):

```
{img attId="57" thumb="y" link="tiki-download_wiki_attachment.php?attId=58&display"
rel="box[g]"}
```

Would produce this on this site:

Zoom image on mouse over

Below is an example of using a thumbnail image (apples) that enlarges when moused over:

```
{img attId="57" thumb="zoom"}
```

Would produce this on this site:

Zoom image in a modal box

Add the parameter `thumb="zoombox"`. Then you will be able to get image magnification, when the source image is bigger than the size shown on screen. Full size image appears with zoom option in a "Colorbox" overlay when thumbnail is clicked.

Below is an example of using a thumbnail image (pears) that enlarges in the Colorbox modal overlay:

```
{img src="img/wiki_up/393px-Pears.jpg" thumb="zoombox"}
```

Would produce this on this site:

Avoid images being resized and relocated in Slideshows

This S5 slideshow engine in Tiki (see PluginSlideShow) resizes and relocates images automagically by deafault, in order to allow quickly show content, and a small thumbnail of the image at the upper right corner of the slide.

If you prefer to have the image shown at its original size and position, you can add the parameter `class="fixedSize"` to your `img` call. Example:

This code would show the image as a small thumbnail in the upper right corner of the slide:

But this code would allow the image to be shown at the original size of 500px and at the same position where this code was written.

| code to allow resizing and relocating the image |
```
{img src="display2" rel="box[g]" width="500"}
```

| code to keep original size and position |
```
{img src="display2" rel="box[g]" width="500" class="fixedSize"}
```

For a better usage with Social Network

A parameter was added to facilitated integration with Social Network application.

To tell open graph what is the featured picture to be used in a post, story, etc...(and may be something different for twitter) you can use the "featured" parameter.

```
{img type="src" src="display2228" alt="TikiFest Virtual 2021 banner" featured="y"}
```

Multi-resolution images (Retina display)

Added in Tiki18. See Multi-resolution images

Notes

When the SEFURLs feature is enabled you can enter "displayID" (where ID is the number of the image in the File Gallery) in the image source field (the `src` param).
