

The Kanban feature doesn't work in [Tiki24](#) and we are hard at work to get it ready for [Tiki25](#). It will not be backported to Tiki24 because we need to make some not-easy-to-backport changes.

TODOs from Benoit G:

- Support other enumerable fields, most importantly item links. If not, it may not be that usable for users.
- General filtering, and specifying default values for new cards (so they are included in the filter...). Discussed with Jonny, surprisingly annoying to implement cleanly syntactically. Without this the feature would be unusable for more advanced use cases (no way to restrict by project for example). This is the only remaining thing that will change the user facing syntax (additions only most probably however).

Plugin Kanban

Will be introduced in [Tiki25](#). Use this [wiki plugin](#) to move [tracker](#) items with drag & drop capabilities in Trello-like boards.

If setting up manually:

It requires following preference settings to work:

- [API](#) access enabled (**Security > API access**),
- Always Load Vue.js (**Features > Interface > Always Load Vue.js**),
- Enable Vue.js (**Features > Interface > Enable Vue.js**)

Search for "vuejs". Tiki search wont find "vue" or "vue.js".

Alternatively using profiles:

On fresh installs of Tiki $\geq 25.x$ you will be able to use

https://profiles.tiki.org/Kanban_Board via the Wizard, click to apply any profile but click 25.x as version then enter "Kanban" in the search field of the profiles management page. Then apply the profile and visit <https://example.org/tiki-index.php?page=Kanban-Board>.

Parameters

Introduced in Tiki 24. Required parameters are in **bold**.

[Go to the source code](#)

Preferences required: `wikiplugin_kanban`

Parameters	Accepted Values	Description	Default	Since
title	word	Title text on each card.		24.0
xaxis	word	The columns, usually a dropdown list with options such as "Wishes", "Work" and "Done".		24.0
yaxis	word	Sort order for cards within a cell, could be date or a numeric (sortable) field		24.0
wip	text	Work in progress limit is a comma-separated list of numbers defining the WiP limits for every column. If you need a single limit for the whole board, specify just one number here.		24.0
description	word			24.0
swimlane	word	Defines the "rows" or "swimlanes". Can be any list type field		24.0
trackerId	int	Tracker to search from	0	24.0

Examples

Example 1

This code:

```
{kanban trackerId="8" title="Kanban Board for doc.t.o issues" description="Item Description" xaxis="f_113" yaxis="f_118" swimlane="f_117"}
```
