Plugin Page (PluginPage)

This plugin checks what page you are on, and if it matches to the passed-in parameter, the data portion is displayed on the wiki page.

Usage

The PAGE plugin usage is:

```
{PAGE(page=pagename) /}data{PAGE}
```

Example:

```
{PAGE(page=Guard)}{REDIRECT(page=Home) /}{PAGE}
```

Explanation of above Example:

The PAGE plugin tests if the user is on wiki page named "Guard"; if so, the user is redirected to the Home page.

Actual code from the plugin (lib/wiki-plugins/wikiplugin_page.php):

```
function wikiplugin_page($data, $params) {
    global $page;
    if ($page == $params['page']) {
        return $data;
    }
}
```

Note:
