

# Plugin Subscript

Use this [wiki plugin](#) to render characters as subscript text (slightly below the regular line of text and smaller). It is the equivalent of using `<sub></sub>` tags in HTML.

## Parameters

There are no parameters required - only the text between the `SUB` tags is needed.

## Examples

### Basic Example

---

*This code,*

*Produces:*

```
This is regular text{SUB()}and this  
is subscript text{SUB}
```

This is regular font<sub>and this is subscript</sub>

---

### Example with Formatted Subscript

---

*This code,*

*Produces:*

```
This is regular text{SUB()}''and  
this is italic subscript''{SUB}
```

This is regular text<sub>and this is italic subscript</sub>
