

Plugin WYSIWYG

Introduced in [Tiki9](#)

Use this [wiki plugin](#) to have a **WYSIWYG** section for part of a page. For example, you want to use WYSIWYG for a table, but keep most of the page as wiki syntax. The WYSIWYG feature (which is when you want the full page to be WYSIWYG) doesn't need to be activated.

Parameters

Plugin Manager error: wysiwyg plugin not found

Note that [HTML Purifier](#) is always on for your security when using this plugin. Invalid/insecure HTML is scrubbed. If you don't want this, you need to manually edit [lib/wiki-plugins/wikiplugin_wysiwyg.php](#)

Example

When you see the page, you can mouse over any section of the page surrounded by `PluginWysiwyg` tags in the source, and the background of that section will change color (section 2 in the following screenshot). If you click on one of those sections (section 1 in the following screenshot), you open it for edition in **WYSIWYG** mode, while keeping the rest of the page still closed for edition.

---------	--------

If you edit the wiki page as usual, you will see the wiki syntax with sections in html syntax where the html tags are enclosed by PluginWysiwyg tags.

```
