

Shopping cart

Since [Tiki5](#) there has been a basic shopping cart feature in Tiki and, since [Tiki7](#), there are a number of advanced features that can be further configured.

Products or services can be managed in [trackers](#).

They can be displayed in [wiki](#) pages using the [PluginList](#), the [PluginCustomSearch](#) or the [Pretty Tracker](#) method and added to [Module Cart](#) through the [PluginAddToCart](#), to have information collected to a checkout page and sent to [payment](#).

The profile [Shopping Cart](#) can be used to get started easily with the Tiki Shopping Cart but there is also a more advanced Shopping Cart (Advanced Shopping Cart tab) that implies orders, stock, bundle and gift management.

Option	Description	Default
Payment heading	Heading displayed on payment form	Cart Check-Out
Products tracker name	Name of tracker that is the products tracker, needed for advanced cart features; the item ID will be the product code.	None
Orders tracker name	Name of tracker that is the orders tracker	None
Order items tracker name	Name of tracker that is the order items tracker	None
Product classes tracker name	Name of tracker that is the product classes tracker	None
Products tracker ID	ID of the tracker that is the products tracker, which is needed for advanced cart features; the item ID will be the product code.	0
Product name field name	In the products tracker, the name of the field for the product name that will be used as the label of the product, for example in a bundle.	0
Product price field name	In the products tracker, the name of the field for the product price	0
Product class ID field name	In the products tracker, the name of the field for the product class ID	0

Option	Description	Default
Bundled products feature for cart	Activate the bundled products feature. This requires a products tracker to be set up properly, and the item ID must be the product code.	Disabled
Items in bundle field name	In the products tracker, the name of the field for a comma-separated list of product IDs of products in the bundle (that is, if the field contains anything, then this product is a bundle). You can also specify the number of the sub-products; for example, 23:("colon")2,24 means item 23 (x2) + item 24 (x1).	0
Manage product inventory	Activate product inventory feature. This requires a products tracker to be set up properly, and the item ID must be the product code.	Disabled
Inventory type field ID	In the products tracker, the ID of the field to store the inventory type; the value of the field must be "none" or "internal".	0
Inventory total field ID	In the products tracker, the ID of the field to store the total inventory of products	0
Inventory total less hold field ID	In the products tracker, the ID of the field to store the total inventory of products less the amount on hold because they are currently in carts	0
Inventory hold timeout	Minutes to hold inventory before making it available again when there is no user cart action	15 minutes
Record cart orders in trackers	This feature is available for registered users and requires two trackers to be created and configured, an orders tracker and an orders item tracker. Profiles also need to be configured, to do the recording.	None
Order tracker ID	ID of the tracker that contains the order - needed for advanced cart features.	0
Order user field	User making the order field	0
Order date field	Date and time of the order field	0
Order total field	Total cost of the order field	0
Order invoice field	Payment system invoice Id field	0
Order weight field	Payment system order weight field in grammes	0
Order Items tracker ID	ID of the tracker that contains the order items - needed for advanced cart features.	0

Option	Description	Default
Order Item Order field	ItemLink field pointing to the Item's Order	0
Order Item Product field	ItemLink field pointing to the Item's Product	0
Order Item price field	Total price for the Item	0
Item quantity field	Number of products in this Item	0
Item User field	User Selector field who added this Item	0
Item inputedprice field	Unknown	0
Allow anonymous shopping	Allow shopping by anonymous users and record the orders in trackers.	Disabled
Anonymous shopper info profile	Wiki page containing the profile for creating order items for anonymous users (page name must not have spaces)	None
Anonymous users order review page	Wiki page where anonymous users can review their orders	None
Temporary shopper group	Group name of group with permission to access review page via a token	None
Enable association of product orders with events	Enable association of products with events (or projects, etc.).	Disabled
Associated event ID field name	In the products tracker, the field name for the associated event ID. This is needed for the associated events cart feature, and requires an events tracker to be set up in which the item ID there is the event ID to be associated with.	0
Events tracker ID	Tracker ID of tracker that is the events tracker	0
Events tracker name	Name of tracker that is the events tracker	None
Event start field name	Field name in events tracker of start date/time	None
Event end field name	Field name in events tracker of end date/time	None
Item event code field		0
Item event start field		0
Item event end field		0
Item parent code field		0
Allow exchange of products		None

Option	Description	Default
Payment heading	Heading displayed on payment form	Cart Check-Out
Products tracker name	Name of tracker that is the products tracker, needed for advanced cart features; the item ID will be the product code.	None
Orders tracker name	Name of tracker that is the orders tracker	None
Order items tracker name	Name of tracker that is the order items tracker	None
Product classes tracker name	Name of tracker that is the product classes tracker	None
Products tracker ID	ID of the tracker that is the products tracker, which is needed for advanced cart features; the item ID will be the product code.	None
Inventory type field ID	In the products tracker, the ID of the field to store the inventory type; the value of the field must be "none" or "internal".	0

Inventory hold timeout	Minutes to hold inventory before making it available again when there is no user cart action	15 minutes
Bundled products feature for cart	Activate bundled products feature. This requires a products tracker to be set up properly, and the item ID must be the product code	Disabled
Record cart orders in trackers	This feature applies to registered users and requires two trackers to be created and configured, an orders tracker and an orders item tracker. Profiles also need to be configured, to do the recording.	None
Orders profile	Wiki page containing the profile for creating orders (page name must not have spaces)	None
Order item profile	Wiki page containing the profile for creating orders items (page name must not have spaces)	None
Allow anonymous shopping	Allows shopping by anonymous users and record the orders in trackers	Disabled
Anonymous orders profile	Wiki page containing the profile for creating orders for anonymous users (page name must not have spaces)	None
Anonymous order item profile	Wiki page containing the profile for creating order items for anonymous users (page name must not have spaces)	None

Option	Description	Default
Anonymous shopper info profile	Wiki page containing the profile for creating order items for anonymous users (page name must not have spaces)	None
Anonymous users order review page	Wiki page where anonymous users can review their orders	None
Temporary shopper group	Group name of group with permission to access review page via a token	None
Allow association of product orders	Allow association of products with events (or projects, etc.)	Disabled
Events tracker ID	Tracker ID of tracker that is the events tracker	None
Events tracker name	Name of tracker that is the events tracker	None
Event start field name	Field Name in events tracker of start date/time	None
Event end field name	Field Name in events tracker of end date/time	None
Allow exchange of products		None
Order items tracker ID	Tracker ID of tracker that is the order items tracker	None
Gift certificates		Disabled
Gift certificate tracker ID	ID of the tracker that is the gift certificate tracker	None
Gift certificate tracker name	Name of tracker that is the gift certificate tracker	None

Option	Description	Default
Payment Heading	Heading displayed on payment form	Cart Check-Out
Products Tracker Name	Name of tracker that is the Products tracker, needed for advanced cart features, the itemId will be the product code	None
Orders Tracker Name	Name of tracker that is the Orders tracker	None
Order Items Tracker Name	Name of tracker that is the Order Items tracker	None
Product Classes Tracker Name	Name of tracker that is the Product Classes tracker	None

Option	Description	Default
Products Tracker ID	ID of the tracker that is the products tracker, which is needed for advanced cart features; the item ID will be the product code	None
Inventory Type Field ID	In the products tracker, the ID of the field to store the inventory type; the value of the field must be "none" or "internal"	0
Inventory Total Field ID	In the products tracker, the ID of the field to store the total inventory of product	None
Inventory Total Less Hold Field ID	In the products tracker, the ID of the field to store the total inventory of product less the amount on hold because they are currently in carts	None
Product Name Field Name	In the products tracker, the name of the field for the product name that will be used as the label of the product, for example in a bundle.	None
Product Price Field Name	In the products tracker, the name of the field for the product price.	None
Items in Bundle Field Name	In the products tracker, the name of the field for a comma-separated list of product IDs of products in the bundle (that is, if the field contains anything, then this product is a bundle). You can also specify the number of the sub-products; for example, 23:(<code>"colon"</code>)2,24 means item 23 (x2) + item 24 (x1)	None
Associated Event ID Field Name	In the products tracker, the field name for the Associated Event ID. This is needed for the Associated Events cart feature, and requires an Events tracker to be set up in which the item ID there is the event ID to associate with	None
Product Class ID Field Name	In the products tracker, the name of the field for the Product Class ID, needed for the Gift Certificates cart feature.	None
Gift Certificate Template Field Name	In the products tracker, the name of the field for the Gift Cert Template, needed for the Gift Certificates cart feature.	None
Manage product inventory	Activate product inventory feature. This requires a products tracker to be set up properly, and the item ID must be the product code	Disabled
Inventory Hold Timeout (minutes)	Minutes to hold inventory before making it available again when there is no user cart action	15
Bundled products feature for cart	Activate bundled products feature. This requires a products tracker to be set up properly, and the item ID must be the product code	Disabled

Option	Description	Default
Record cart orders in trackers (registered users)	This feature requires two trackers to be created and configured, an Orders tracker and an Orders Item tracker. Profiles also need to be configured, to do the recording.	None
Orders Profile	Wiki page containing the profile for creating orders (page name must not have spaces)	None
Order Item Profile	Wiki page containing the profile for creating orders items (page name must not have spaces)	None
Allow anonymous shopping and record the orders in trackers	Allows shopping by anonymous users	Disabled
Anonymous Orders Profile	Wiki page containing the profile for creating orders for anonymous users (page name must not have spaces)	None
Anonymous Order Item Profile	Wiki page containing the profile for creating order items for anonymous users (page name must not have spaces)	None
Anonymous Shopper Info Profile	Wiki page containing the profile for creating order items for anonymous users (page name must not have spaces)	None
Anonymous Users Order Review Page	Wiki page where anonymous users can review their orders	None
Temporary Shopper Group to Access Review Page via Token	Group name of group with perms to access review page via token	None
Allow association of product orders with events (or projects, etc.)	Allow association of products with events (or projects, etc.)	Disabled
Events Tracker ID	Tracker ID of tracker that is the Events tracker	None
Events Tracker Name	Name of tracker that is the Events tracker	None
Event Start Field Name	Field Name in Events tracker of start date/time	None
Event End Field Name	Field Name in Events tracker of end date/time	None
Allow exchange of products	Allow exchange of products	None
Order Items Tracker ID	Tracker ID of tracker that is the Order Items tracker	None
Gift certificates	Gift Certificates	Disabled
Gift Certificate Tracker ID	ID of the tracker that is the Gift Certificate tracker	None

Option	Description	Default
Gift Certificate Tracker Name	Name of tracker that is the Gift Certificate tracker	None

Option	Description	Default
Payment Heading	Heading displayed on payment form	Cart Check-Out
Products Tracker Name	Name of tracker that is the Products tracker, needed for advanced cart features, the itemId will be the product code	None
Orders Tracker Name	Name of tracker that is the Orders tracker	None
Order Items Tracker Name	Name of tracker that is the Order Items tracker	None
Product Classes Tracker Name	Name of tracker that is the Product Classes tracker	None
Products Tracker ID	ID of the tracker that is the products tracker, which is needed for advanced cart features; the item ID will be the product code	None
Inventory Type Field ID	In the products tracker, the ID of the field to store the inventory type; the value of the field must be "none" or "internal"	0
Inventory Total Field ID	In the products tracker, the ID of the field to store the total inventory of product	None
Inventory Total Less Hold Field ID	In the products tracker, the ID of the field to store the total inventory of product less the amount on hold because they are currently in carts	None
Product Name Field Name	In the products tracker, the name of the field for the product name that will be used as the label of the product, for example in a bundle.	None
Product Price Field Name	In the products tracker, the name of the field for the product price.	None
Items in Bundle Field Name	In the products tracker, the name of the field for a comma-separated list of product IDs of products in the bundle (that is, if the field contains anything, then this product is a bundle). You can also specify the number of the sub-products; for example, 23:(<code>"colon"</code>)2,24 means item 23 (x2) + item 24 (x1)	None

Option	Description	Default
Associated Event ID Field Name	In the products tracker, the field name for the Associated Event ID. This is needed for the Associated Events cart feature, and requires an Events tracker to be set up in which the item ID there is the event ID to associate with	None
Product Class ID Field Name	In the products tracker, the name of the field for the Product Class ID, needed for the Gift Certificates cart feature.	None
Gift Certificate Template Field Name	In the products tracker, the name of the field for the Gift Cert Template, needed for the Gift Certificates cart feature.	None
Manage product inventory	Activate product inventory feature. This requires a products tracker to be set up properly, and the item ID must be the product code	Disabled

Manage Product Inventory

Allows inventory to be set and tracked for products in a tracker. The feature also puts products on hold when they are added to a users' cart and are returned subsequently if not bought.

Bundled Products

Allows one product to "contain" multiple other products. The price of the bundle itself is the price that the user pays. The child products' prices are ignored when a bundle is bought.

Record Orders in Trackers

Allows orders and order items to be saved in trackers and therefore, using the [Unified Search Index](#) can be reviewed or used in conjunction using the [PluginList](#), the [PluginCustomSearch](#) or with [Pretty Trackers](#) to show users what they have bought, etc...

The recording also allocates and keeps track of value inputted to child products of bundles (not the actual price paid since the user pays the price of the bundle, not the child products).

You will need at least two trackers, one to store Orders and Order Items, and two special profiles to be placed on wiki pages.

Profiles needed to record orders

These profiles are to be placed on wiki pages on the system where the cart is. The tracker and field IDs in the profiles are to be updated so that orders and order items information can be recorded in the right fields.

[OrderProfile](#) and [OrderItemProfile](#)

Trackers Needed

Note that for now, the code expect certain specific Field Names. See [Shopping Cart Trackers](#) for more information
