Preferences

Preferences (Tiki website configuration preferences - not to be confused with User Preferences) are the more than 2000 settings and options set in the various admin panels. New features added to Tiki bring new preferences, and the preferences related to existing features also are fine-tuned as the features are improved.

This set of pages lists all preferences alphabetically by feature name:

- Preferences - Articles to Community
- Preferences - Connect to File Galleries
- Preferences - Forums to Intertiki
- Preferences - Log-in
- Preferences - Look and feel to Modules
- Preferences - Payments to Performance
- Preferences - Polls to RTC
- Preferences - Score to SEFURL
- Preferences - Semantic links to Stats
- Preferences - Text editing to Users
- Preferences - Video to WYSIWYG

- Preferences can be overridden per perspective.
- Preferences are searchable on tiki-admin.php
- Preferences can be filtered by basic/advanced/experimental/unavailable to simplify the admin panels for new administrators.
- Preferences can overridden via System Configuration.
