

This feature is no longer supported or relevant because browsers now have spellchecking, and that's where it should be handled.

Using the Tiki Spellchecker

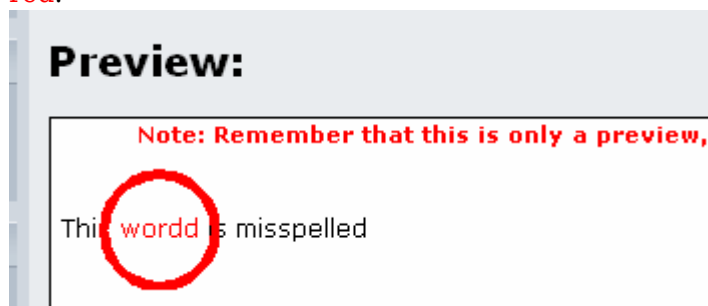

If you have permission to edit a specific page or object, and if the **Spellchecking** option for that feature is [enabled](#), then Tiki will display the **Spellcheck** option when you edit a wiki page or text area:

A screenshot of the Tiki edit form. The form has a sidebar on the left with labels: Edit, Summary:, Copyright:, Title:, Year:, Authors:, Spellcheck:, Import page:, Upload picture, Cache, License:, and Important:. The main area contains input fields for Title, Year, and Authors. The Spellcheck: label is circled in red, and its corresponding checkbox is unchecked. Below it are buttons for 'Import page', 'Browse...', and 'export all versions'. Further down are 'Upload picture' and 'Browse...' buttons, a 'Cache' dropdown menu set to '0 (no cache)', a 'preview' button, a 'License:' field with a link to 'Creative Commons Attribution-ShareAlike License', and an 'Important:' field with a warning message. At the bottom are 'Minor', 'save', and 'cancel edit' buttons.

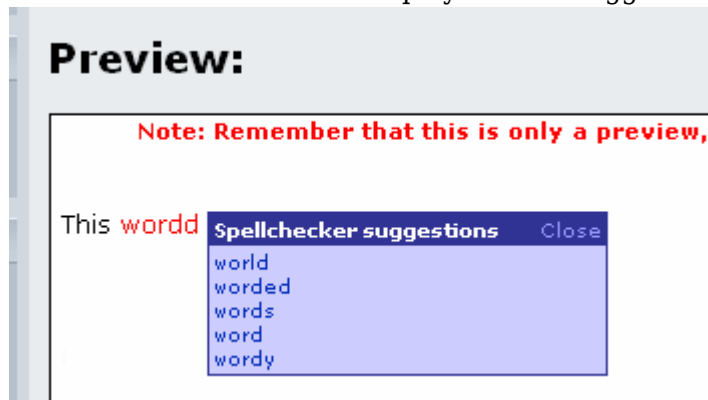

Spellcheck option when editing a wiki page.

To use the spellchecker, use this procedure:

1. Select the **Spellcheck** option.
2. Click **Preview**. Tiki will show a preview of the page with your edits. Any misspelled words will appear **red**.

3. Click a red word. Tiki will display a list of suggested corrections in a popup window.

4. Click the correct word in the popup menu. Tiki will replace the misspelled word with the selected

correction.

Note: Re-preview the page to view the correction.
