

Switch User

At tiki-login_scr.php or [Module login_box](#):

This permits an admin to become any user, without knowing their password or affecting the date of last login.

A screenshot of a web browser window showing a 'Login' dialog box. The dialog box has a title bar that says 'Login'. Inside, it displays 'logged in as: marclaporte' in a monospaced font. Below this, the word 'Logout' is written in a bold, blue, sans-serif font. At the bottom left, there is a label 'user:' followed by a text input field. To the right of the input field is a button labeled 'set'.

Just type the desired username in the box and click "set".

This is very useful to test permissions and to see what the end user sees.

If this user is not in the Admins groups, you'll need to logout and log back in as admin thereafter.
