

TIM is a misleading acronym for the Tiki Instance Manager

**The code is here:**

<https://gitlab.com/tikiwiki/tiki/-/tree/master/doc/devtools/tim>

The name is confusing because it is actually custom-built for the specific needs of the [show.tiki.org](https://show.tiki.org) project, and it relies on [Console](#). There are no current plans to expand it into a general-purpose tool.

For a general purpose Tiki Manager, see [Tiki Manager](#)
