

No node, no npm, no building - just some external files and you can have some Vue magic...
You can resize and move those blocks:

```
<script src="https://unpkg.com/vue@2/dist/vue.js"></script> <script  
src="https://cdn.jsdelivr.net/npm/vue3-sfc-loader@0.8.4/dist/vue2-sfc-loader.js"></script> <script  
src="https://cdn.jsdelivr.net/npm/vue-grid-layout@2.4.0/dist/vue-grid-layout.umd.min.js"></script>
```

```
`/* --> */, type: '.vue', } } return fetch(url).then(res => res.text()); }, addStyle(textContent) { const style =  
Object.assign(document.createElement('style'), { textContent }); const ref =  
document.head.getElementsByTagName('style')[0] || null; document.head.insertBefore(style, ref); }, }  
const { loadModule } = window['vue2-sfc-loader']; loadModule('/main.vue', options) .then(component =>  
new Vue(component).$mount('#app'))
```
