

Introduced in [Tiki18](#).

After applying a profile, a tiki site admin can revert a profile changes.
You will find that option through the [Tiki logs](#) user interface.

The screenshot shows the 'Tiki Logs' page. On the left is a sidebar with links like Home, Search, Contact Us, Wiki, Articles, File Galleries, and Settings. Below that is a 'Quick Edit a Wiki Page' section with a text area and a 'Create/Edit' button. The main area is titled 'Tiki Logs' and contains a table of log entries. The table has columns: Id, Type, Time, User, Message, IP, and Client. There are two entries:

Id	Type	Time	User	Message	IP	Client
16	profile apply	17:34	admin	Small_Organization _Web_Presence.12	172.28.128.1	Mozilla/5.0 (Macintosh;...
15	profile	17:34	admin	erased all cache content	172.28.128.1	Mozilla/5.0 (Macintosh;...

A 'Revert' button is visible next to the first log entry. At the top right, there are 'Log SQL' and 'Export through Action Log' buttons. Below the table is a 'Find...' search bar and a 'Find' button.
