

Welcome,

this is just another page where some early user/admin experience is share.

1. First install with EasyPHP 1.7 and Tiki1.9.7 was smooth.

(There was a minor hiccup though, due to incomplete extraction of the zip file)

2. Am now working on RSS feeds.

Since, I don't have much content yet, it's an inbound feed from wired.com

(<http://feeds.wired.com/wired/cars?format=xml>)
