

# Wizards

Starting in [Tiki12](#), some wizards were added to Tiki to help in the initial setup based on configuration templates like "Macros" (**Profiles Wizard**), as well as further site configuration (**Admin Wizard**), to help you while upgrading your tiki site to see what's new (**Changes Wizard**), and to help you as site admin to collect more information from your users if you need it (**Users Wizard**).

- [Profiles Wizard](#)
- [Admin Wizard](#)
- [Changes Wizard](#)
- [User Wizard - Set up the User Details screen](#)

The screenshot shows the Tiki Setup wizard interface. At the top left is the Tiki logo (wiki cms groupware) and a 'Log out' link. A tooltip titled 'How on admin log-in' is visible. The main heading is 'Tiki Setup'. Below it is a 'Get Started' section with a green checkmark and text: 'Congratulations! You now have a working instance of Tiki 21.3vcs. You may start using it right away, or you may configure it to better meet your needs, using one of the configuration helpers below.' A 'Tip' box says: 'Mouse over the icons to know more about the features and preferences that are new for you. Example: [icon]'. A red box highlights three wizard options: 1. 'Configuration Profiles Wizard' with a key icon, text: 'You may start by applying some of our configuration templates through the Configuration Profiles Wizard. They are like the Macros from many computer languages. It is best to apply them from the start and you can always preview and reverse the process.' and a 'Start Configuration Profiles Wizard (Macros)' button. 2. 'Configuration Wizard' with a gear icon, text: 'Alternatively, you may use the Configuration Wizard. This will guide you through the most common preference settings in order to customize your site. You will easily be able to configure options like: languages, date and time, user login, theme, website title and logo, etc.' and a 'Start Configuration Wizard' button. 3. 'Changes Wizard' with an upward arrow icon, text: 'Or you may use the Changes Wizard. This will guide you through the most common new settings and informations in order to upgrade your site.' and a 'Start Changes Wizard' button. Below the red box are two more sections: 'Control Panels' with a gear icon, text: 'Use the Control Panels to manually browse through the full list of preferences. From the main administration page you'll be able to configure your Tiki, to enable features not set on by default and to change settings. To Avoid Getting Overwhelmed by the impressive number of settings as a Startup Tiki Admin we set a preferences filters for Basic and Advanced features to start with.' and a 'Go to the Control Panels' button. 'Server Fitness' with a heart icon, text: 'You can check if your server meets the requirements for running Tiki version 21.3vcs. Using our home made standalone script for server environment settings diagnostics you can check that everything is ready to run your Tiki properly. It is very useful for any PHP app, as it checks over 50 different things and provides contextual feedback.' and a 'Go to the Tiki Server Compatibility Check' button. At the bottom right are 'Start the Wizardry' and 'Close' buttons.
