

Since [Tiki2](#), Tiki includes a Wysiwyg (*What You See Is What You Get*) editor:  , through the integration of [Fckeditor](#) in the Wiki feature. Since [Tiki6](#), this wysiwyg mode is powered by CKeditor, the new version family of the same engine.

It can be enabled at Admin -> General panel.

Please note that WYSIWYG doesn't work with [Edit by Section](#).

Description of Wysiwyg Editor Features

Wysiwyg Editor is optional:	If disabled, the normal editor will not be available anymore.
... and is displayed by default:	If checked, it will be the default editor when creating or modifying a wiki page.
"Content is parsed like a wiki page"	means all content of the wiki page is parsed, then <code>__bold__</code> is shown as bold in parsed result, and is still displayed <code>__bold__</code> in the source of the wiki page. Then you can mix wysiwyg edition and wikistyle code.
"Content is partially parsed"	partial parsing includes: * parsing of links * parsing of images and generally what is included in { } * parsing of wikiplugins
Toolbar skin:	It selects the theme styles for icons, colors, etc. used by Wysiwyg editor

Toolbar content:	Shows a list of features that will be loaded with the editor. For more information on these features, check the FCKEditor Documentation at http://www.fckeditor.net/
