

## Module Search

New to [Tiki6](#), this merges

- Search text (of all the site)
- Search title of wiki page
- Edit page

### Parameters

Multi-purpose search module (go or edit page by name and/or search site)

[Go to the source code](#)

Parameters	Accepted Values	Description	Default	Since
<code>additional_filters</code>		Filters to be applied to the search results, as a URL-encoded string. Ex.: categories=1+AND+2&prefix~title=Test		
<code>advanced_search</code>		Use advanced (boolean) search (full text search only). Default: "y" (use advanced search)		
<code>advanced_search_option</code>		Show advanced search checkbox (full text search only). Default: "n" (advanced search checkbox off)		
<code>advanced_search_help</code>		Show advanced search help icon (full text search only). Default: "n" (advanced search help off)		
<code>categId</code>		If set to a category identifier, pages created through the module are automatically categorized in the specified category. Not set by default.		
<code>compact</code>		Makes the three buttons only appear on mouse-over. Default: "n"		
<code>default_button</code>		Action to perform on entering . Default: "search" (search go edit)		
<code>edit_action</code>		If set, send the form to the given location (relative to Tiki's root) for processing. Default: tiki-editpage.php		
<code>edit_submit</code>		The label on the button to submit the form. Default: Edit		

<code>templateId</code>		If set to a template identifier, the specified template is used for creating new Wiki pages. Not set by default.
<code>go_action</code>		If set, send the form to the given location (relative to Tiki's root) for processing. Default: tiki-listpages.php
<code>go_submit</code>		The label on the button to submit the form. Default: Go
<code>search_heading</code>		Optional heading to display at the top of the module's content.
<code>legacy_mode</code>		Setting to emulate previous behaviour. Default: "" ("search"=search_box, "page"=search_wiki_page, "quick"=quick_edit)
<code>search_action</code>		If set, send the form to the given location (relative to Tiki's root) for processing. Default: tiki-searchresults.php or tiki-searchindex.php (for Tiki search)
<code>search_submit</code>		The label on the button to submit the form. Default: Search
<code>show_edit_button</code>		Show edit button. Default: "y" (do show edit button)
<code>show_go_button</code>		Show go to page button. Default: "y" (do show go button)
<code>show_object_filter</code>		If set to "y" shows a dropdown of sections to search. Default: "n" (no object filter)
<code>show_search_button</code>		Show search button. Default: "y" (do show search button)
<code>tiki_search</code>		If set to "y" the search performed is a "Tiki search". Default: "n" (full text search)
<code>use_autocomplete</code>		If set to "y" input uses autocomplete for pagenames if applicable. Default: "y" (use autocomplete)
<code>input_size</code>	int	Width of the text input field (in characters). Example value: 15. Default: 0 (leave automatic width)
<code>select_size</code>	int	Size of the Search Filter dropdown list. Default: 10

Editing the look of the Search Module:

To remove the Titles button from the module -

1. Go to Admin Modules (tiki-admin\_modules.php) and add the module to your site.
2. The module config page will open.
3. Enter "n" in "Show Go Button" (looks like this became the Titles button).
4. Save.

- I also changed the name of the module to "Action" and the text of the search button to "Search". (Sorry, the tooltip disappears when you edit the module.) This leaves a Search button and an Edit button, to edit/create pages.
