

Module "menupage"

This [module](#) will display the content of any wiki page as a [menu](#) in the left or right column or in any other place that a module can be located.

- This type of menu is used as the upper left menu in dev.tiki.org for example.

You can also use this module in the center (main) column.

- See [Happy Scroll theme](#) for details.

Parameters

Displays a Wiki page.

*Required parameters are in **bold**.*

[Go to the source code](#)

Preferences required: feature_wiki

Parameters	Accepted Values	Description	Default	Since
pagemenu	pagename	Page to display in the menu. Example value: HomePage.		
menu_class	text	Class of the menu container		
menu_id	text	Id of the menu in the DOM		
menu_type	alpha	Display the page as a menu (horiz / vert)		
use_namespace	int	Prepend the default namespace to the page name for localized menus per workspace (1/0)	0	

Usage

On the page *Admin > Modules* (tiki-admin_modules.php)

- Assign a new module
- Choose the module "menupage" from the drop-down list.

The module will have the same title as the wiki page.

You can assign this "**menupage**" to any module zone (See [Module Admin](#) page if needed, or you can include it within a wiki page, using the [PluginModule](#).

Example

Imagine you have a page called))SideMenu(, with this content:

```
(:arrow:) [tiki-index.php|Home Page] (:arrow:) [tiki-lastchanges.php|Last changes] (:arrow:) [tiki-view_forum.php?forumId=1|Forum Wiki-translation] "[tiki-editpage.php?page=SideMenu|edit]"
```

The wiki page itself looks like this:

Then, the module **menupage**, like all modules, can be assigned to a group of users.

The assigned module looks like this:

You can see this example live in <http://www.wiki-translation.com>

For more advanced menus, see "[Menu](#)" feature.
